

## Butterfly Valves

### Features

- Range of linings for different applications
- Tight shut-off

### Specification

Type	Flangeless wafer, rubber lined
Function	Isolating or regulating
Installation	Clamping between two flanges
To suit flanges	PN6, PN10, PN16
Valve shut-off pressures:	
	6 bar
	10 bar
	16 bar
Standard Materials:	
Body	Cast iron GG25
Disc	S/S 431
Shaft	S/S 431
Pin	S/S 431
Lining	EPDM (-40 to +110°C)
Media type	Water, weak acids
Leakage:	
Standard	Tight shut-off @ 16 bar
Undercut	Tight shut-off @ 6 bar
Country of origin	Netherlands

**NB** All butterfly valves 125mm and above are supplied with undercut discs as standard. This reduces the break-off torque required to operate the valves with out affecting leakage rating up to a maximum pressure of 6 bar.

### Product Codes

<b>VB-W50</b>	50mm Butterfly valve
<b>VB-W65</b>	65mm Butterfly valve
<b>VB-W80</b>	80mm Butterfly valve
<b>VB-W100</b>	100mm Butterfly valve
<b>VB-W125</b>	125mm Butterfly valve
<b>VB-W150</b>	150mm Butterfly valve
<b>VB-W200</b>	200mm Butterfly valve
Linkages:	
<b>VB-LK1</b>	50 to 80mm, 16Nm actuator linkage
<b>VB-LK2</b>	100 to 125mm, 16 to 62Nm actuator linkage
<b>VB-LK3</b>	50 to 65mm, failsafe actuator linkage
<b>VB-LKU1</b>	VB-W100 / Unic10/15 actuator linkage
<b>VB-LKU2</b>	VB-W125 / Unic10/15 actuator linkage
<b>VB-LKU3</b>	VB-W150 / Unic10/30 actuator linkage
<b>VB-LKU4</b>	VB-W200 / Unic20 actuator linkage
<b>VB-LKN4</b>	VB-W200 / Nucom 10nM actuator linkage

See table on page 5 for actuator selection.

## Technical Overview

The VB-W are a series of range of high specification flange-less wafer type butterfly valves capable of tight shut-off. To achieve this high level of sealing, relatively high torque actuators are required to break away from the closed position.

Standard and undercut disc types are available. Standard disc types give tight shut-off up to 16 bar while undercut disc types provide tight shut-off up to 6 bar but require less torque to operate, allowing smaller actuators to be used.

## Torque

The operating torque of butterfly valves of less than DN1000 is generally the result of 3 partial torques:

### 1/ Seating torque:

Torque to overcome the rubber seat friction.

### 2/ Bearing friction torque:

Torque to overcome the friction between the shaft and bearing.

### 3/ Dynamic torque:

Torque developed by pressure differences across a partly opened valve as a result of high flow velocity.

## Operating torques:

DN (mm)	Differential Pressure		
	6 bar	10 bar	16 bar
50	10 Nm	10 Nm	11 Nm
65	13 Nm	14 Nm	15 Nm
80	18 Nm	19 Nm	21 Nm
100	30 Nm	32 Nm	36 Nm
125	42 Nm	46 Nm	52 Nm
150	67 Nm	75 Nm	86 Nm
200	130 Nm	140 Nm	160 Nm

**NB** The operating torques show above are valid **ONLY** for the following conditions:

- The fluid is water without solid particles at a temperature of +1° C to +80° C
- The water does not contain contaminants which may increase the friction between the seating surfaces
- There is **at least** one operation cycle per month
- Flow velocity in the pipe is **not** more than 4 m/s

$$\text{Flow velocity} = \frac{(354 * \text{flow rate in m}^3/\text{h})}{(\text{Valve size in mm})^2}$$

## Flow Velocity

The maximum flow velocities to avoid cavitations, noise and vibration are as follows:

- Liquids 5 m/s
- Gases 50 m/s

## Kv Values

Part Code	Kv Value
<b>VB-W50</b>	95
<b>VB-W65</b>	231
<b>VB-W80</b>	491
<b>VB-W100</b>	690
<b>VB-W125</b>	1450
<b>VB-W150</b>	1945
<b>VB-W200</b>	4095

## Storage Of Valves

Store the valve in dry, dark and cool conditions, preferably indoors with the actual valve temperature higher than the dew point. If outdoor storage is unavoidable, support the valves off the ground and protect the valves with a water-tight cover.

Do not remove the valve packaging or end port protection, until necessary for inspection or installation.

Store the valve in the slightly open position to avoid deformation of the rubber lining.

## Inspection

- 1/ Inspect the valve visually for damage or contamination during transport, handling and storage as this could adversely affect valve performance.
- 2/ Carefully unpack the valve.
- 3/ Check the tag plates if attached on the valve.
- 4/ Inspect the valve interior and lining. It shall be clean, free from foreign matter or damage.
- 5/ Check that all electric components are marked with the correct IP rating and hazardous class when the valve is to be used in a hazardous location (explosive gas or vapour).
- 6/ If practical, actuate the valve through close/open and open/close cycles to check the correct function.

### Inspection (continued)

**Warning:** Avoid contact with the valve disc.

Immediately prior to installation, check the flanges to which the valve is to be fastened. The flanges shall have a raised face or a flat face. The sealing face shall be flat, without burrs, grooves, weld spatters, sharp edges and free from oil. The inside diameter shall be large enough to accommodate the protrusion of the valve disc when the valve is open. The possibility of interference between disc and pipe shall be checked and avoided. Also check that the inside diameter of the flange or pipe bore is not too large as this will reduce the flange to valve sealing of the gasket face.

### Installation Between Flanges

New valves **do not** require additional flange gaskets, the lining will seal against the mating flange face.

Where practical, valves in buried installations should be located in unpaved areas.

As the valve is bidirectional tight shut off, the direction of installation is not relevant.

When installed in a horizontal pipe, valves larger than DN 300 should have the shaft positioned horizontally.

### Installation In An Existing Paperwork

- 1/ Check that the installation length between the pipe flanges is enough to position the valve without damaging the rubber lining.
- 2/ Position the valve in the centre of the pipeline and with the shaft horizontally if possible.
- 3/ Check the bolts for proper size and length.
- 4/ Tighten the bolts in a crisscross fashion until the valve body (metal) touches the flange face.

### Installation In A New Pipeline

- 1/ Weld the flange to the pipe so that the sealing faces are parallel. Caution: Do not weld a connecting flange to the pipe with the valve installed in order to avoid overheating of the rubber lining.
- 2/ After cooling the flange, position the valve in the centre of the pipeline and with the shaft horizontally if possible.

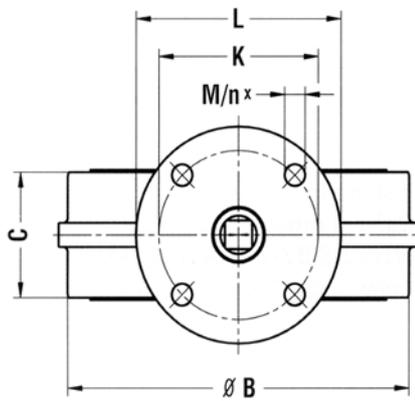

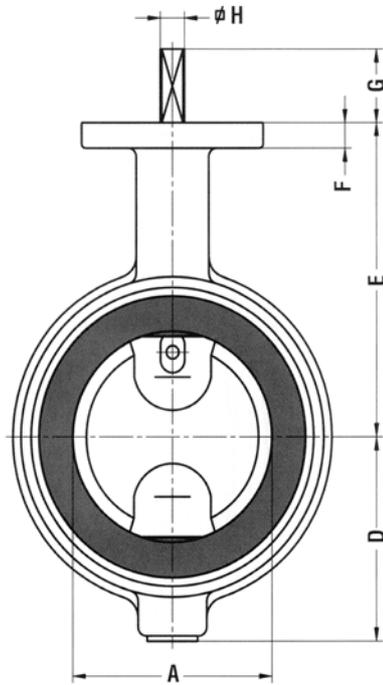

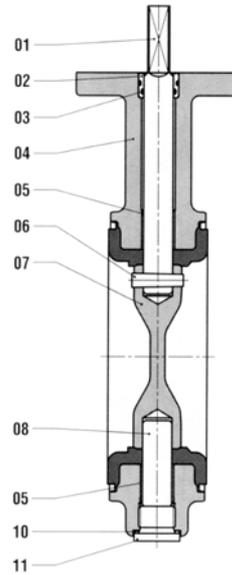

### Installation In A New Pipeline (continued)

**NB** Valves may be fitted when in fully closed position. Valves fitted with spring to open actuators may be fitted when in the fully open position or in the fully closed position.

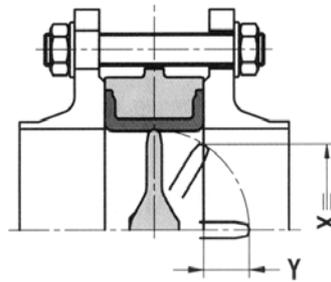

- 3/ Tighten the bolts in a crisscross fashion until the valve body (metal) touches the flange face.

### Testing

- 1/ Open and close the valve (if possible by hand) to ensure no disc interference.
- 2/ Clean the pipe interior with a rinsing fluid compatible with the rubber lining and process.
- 3/ Connect the actuator (if applicable) to the power supply in accordance with the user manual of the actuator.
- 4/ Check the operation and tightness when the system is under (working) pressure.

**Dimensions**

**Construction & Material**

- |    |                   |    |              |
|----|-------------------|----|--------------|
| 01 | Shaft             | 06 | Conical pin  |
| 02 | Bush              | 07 | Disc         |
| 03 | O-ring            | 08 | Shaft        |
| 04 | Rubber-lined body | 10 | Sealing ring |
| 05 | Bearing           | 11 | Plug         |

Part Code	Dimensions (mm)														Weight (kg)
	A	B	C	D	E	T	G	H	K	L	N	n	X	Y

Use **Table 2** to select the a failsafe actuator & linkage for a butterfly valve of known size and known maximum D.P.

**Table 2**

Valve	Control (Failsafe)	6 bar DP				10 bar DP			
		Actuator	Torque (Nm) Required Actuator		Linkage	Actuator	Torque (Nm) Required Actuator		Linkage
VB-W50	24V On/Off	VA-DA1FE	11	16	VB-LK3	VA-DA1FE	11	16	VB-LK3
	230V On/Off	VA-DA2FE	11	16	VB-LK3	VA-DA2FE	11	16	VB-LK3
VB-W65	24V On/Off	VA-DA1FE	13	16	VB-LK3	VA-DA1FE	14	16	VB-LK3
	230V On/Off	VA-DA2FE	13	16	VB-LK3	VA-DA2FE	14	16	VB-LK3

**NB** Failsafe actuators are not available for butterfly valves larger than 65mm or for a D.P. of greater than 10 bar.

See torque information on page 2 of this datasheet.
