## Technical Overview

The ST-CM range of capillary thermostats can be used to control the temperature of liquids and gases in a variety of applications. Liquid filled sensing elements ensure rapid response and accurate switching differentials.

## Installation

1. The ST-CM should only be installed by a competent, suitably trained technician, experienced in installation with hazardous voltages. ( $>50 \mathrm{Vac} \&<1000 \mathrm{Vac}$ or $>75 \mathrm{Vdc} \& 1500 \mathrm{Vdc}$ )
2. Ensure that all power is disconnected before carrying out any work on the ST-CM.
3. Maximum cable is $2.5 \mathrm{~mm}^{2}$, care must be taken not to over tighten terminals.
4. Choose a suitable location for mounting the thermostat.
5. Remove the front cover and mount the ST-CM, using the base as a template fix using suitable screws.
6. Fix the capillary in position.
7. Run cable through the cable gland and terminate as required.
8. Adjust the setpoint as required and replace the front cover.
